### Transport Impact Minimization Policy

ANNEXURE-11

The mitigation measures are adopted to control the negative impacts on environment due to transportation are as follows.

1. All the internal roads shall be asphalted or concreted to reduce the fugitive dust due to truck movement.
2. Dense green belt is planted around the Factory boundary. Trees will plant on all sides of the roads used for transportation in order to arrest dust. Forestation around the unit to act as barrier
3. Water sprinkling along the road where the possibility of dust generation.
4. Regular service and maintenance of vehicles and other Industrial powered equipments in order to control emissions.
5. We are keen on providing group transportation facility for employees. This will minimize the fuel consumption, risk factor involved in driving, lesser emission to air, minimize road traffic, Utilization of lesser parking space etc.
6. We are committed to procure the raw material and other spares from the local market; this will reduce the transport risk factor, as well as it will support the local economy.
7. We are committed to monitor and minimize the transport impacts.

G.Ramesh Gopal
